

Backlog - Group 79

Stakeholders:

- **User:** The person that will use our application
- **Admin:** The person that manages the server, e.g., starts the server locally

Terminology:

- **Board:** A set that contains all the lists.
- **List:** A set of cards relevant to a purpose (i.e: "Daily To Do List" contains all the activities that need to be completed that day).
- **Card:** Activity that needs to be completed (in other words, a task).

Basic Features

As a user, I want ...

- To be able to use a single board
- To be able to create and remove lists in a board
- To be able to add and remove cards in a list
- To be able to drag and drop my lists around the board
- To be able to drag and drop cards
 - From one list to another
 - Changing order in the same list
- To be able to name and rename my lists
- To be able to name and rename my cards
- To have a working client-server application

As an admin, I want ...

- To be able to start and restart the server without losing the data
- That the server does not crash when a client drops out, so I can just leave the server running in the background

Advanced Features

As a user, I want ...

- To be able to create new boards
- To be able to join boards by name/key
- To be able to put in description and nested task list in the card
- To be able to add tags to the cards
- To be able to customize background and tag colors
- To be able to use shortcuts
- To be able to create password protected boards

As an admin, I want ...

- To be able to remove or update the passwords on password protected boards
- To be able to delete boards
